- FY2015 first half financial highlights
- Revenue was ¥542.9 billion, up ¥30.1 billion compared to the same period last year. Business profit was ¥40.2 billion, down ¥10.6 billion. Profit for the period was ¥26.1 billion, down ¥39.5 billion.
- Revenue was in line with the forecast given in the previous outlook, which we released on July 30th. However, every category of profit fell below expectations.

- FY2015 second-quarter financial highlights
- Compared to the same period last year, second quarter revenue increased by ¥15.5 billion, ending at ¥282.0 billion. Business profit was ¥23.7 billion, down ¥3.6 billion. Profit for the period was ¥15.6 billion, down ¥3.4 billion.

	2014/Q2 Actual	2015/Q2 Previous Outlook (ref.	Actual		2014/Q2 Actual	2015/Q2 Previous Outlook (ref	2015/Q2 Actual	Revenue -0. Business profit ±0.9

- FY2015 second-quarter revenue and business profit by business segment
- > Revenue grew year-on-year in every segment, in part due to foreign exchange effects.
- Revenue for the company as a whole exceeded the previous outlook because of increased revenue in printing solutions.
- Business profit in printing solutions and visual communications decreased year-on-year and ended below the previous outlook. Wearable & industrial products, on the other hand, recorded business profit growth.

	+	-/- indicates positive/negative factors
	Business Operations	Environmental Changes
Companywide		 Severe and rapid Latin American currency devaluations
Printing Solutions Ref: Vs. previous outlook - 4.9 billion yen	 Steady sales of high-capacity ink tank printers, higher priced business IJPs, and ink Adjustments of ink cartridge model production timing 	 Higher manufacturing costs for goods produced overseas due to USD appreciation Erosion of prices for ink cartridge models in North America
Visual Communications - 4.1 billion yen	 New record for projector shipments in Q2 	 Sluggish projector market Declining demand from U.S. and European education market Sales of high-added-value models declined and the model mix worsened
Wearable & Industrial Products +2.9 billion yen	 Reduced fixed costs by reorganizing the quartz business, etc. 	 Revenue declined mainly due to effects of semiconductor market conditions

- Key factors in Q2
- In the second quarter, we were severely impacted in printers, projectors and other finished products businesses as price rises and other countermeasures were unable to keep pace with the rapid devaluation of Latin American currencies.
- In business operations, we saw steady sales of high-capacity ink tank models, higher priced business models, and ink.
- On the other hand, there was a delay in some production adjustments for ink cartridge models from the second to the third quarter.
- > We set a new record in the second quarter for projector unit shipments.
- > The quartz business saw a positive effect from a reorganization that reduced fixed costs.
- Against this, we experienced higher manufacturing costs for inkjet printers produced overseas due to dollar appreciation, while in North America there was price erosion for consumer and low- and mid-range office models due to the price promotions of competitors.
- In projectors, the market declined compared to the previous year when there was heavy demand driven by factors such as the football World Cup and there was a worsened model mix because of a lower number of education tenders in the United States and Europe and sales of highadded-value models declined.
- Semiconductor business profit was affected by market conditions.
- So, although we made steady strategic progress in the second quarter and are seeing benefits emerge, the results strongly indicate environmental changes in the second half, including a global economic slowdown and aggressive promotional pricing by competitors.

- 2015 full-year financial outlook
- We revised our outlook based on our financial performance through the second quarter and based on fresh analysis of the market environment going forward.
 We are now forecasting 1,100 billion yen in revenue, ¥82 billion in business profit, ¥91 billion in profit from operating activities, and ¥60 billion in profit for the year.
- Please note that a gain on sale of an asset that belonged to our Shonan Plant was recorded in profit from operating activities. For details, please see today's news release.
- Assumed exchange rates for the third and fourth quarters remain at 115 yen to the dollar and 125 yen to the euro.
- > We are standing by our full-year dividend outlook of 60 yen per share.

- FY2015 full-year and half-year business profit broken down by segment
- We lowered our full-year business profit outlook compared to the previous outlook by ¥14 billion in printing solutions and by ¥7 billion in visual communications. We raised the outlook in wearable & industrial products by ¥1 billion.

Future Outlook	EXCEED YOUR VIS
 Important secor 	d-half factors (vs. previous outlook)
✓ In consideration of	ousiness strategies are progressing smoothly of environmental changes, all currently visible risks o the 2nd half outlook
Strategic Progress	 IJP strategies are progressing smoothly Steady deployment of measures aimed at growth over the course of the next mid-range plan □> Investment in new product development, production capacity expansion, and brand strengthening
Business Environment	 Uncertain prospects for the global economy including the Chinese economic slowdown and currency devaluation/ delayed economic recovery in Latin America Sluggish markets and decline in public procurement Stepped up promotional pricing by competitors

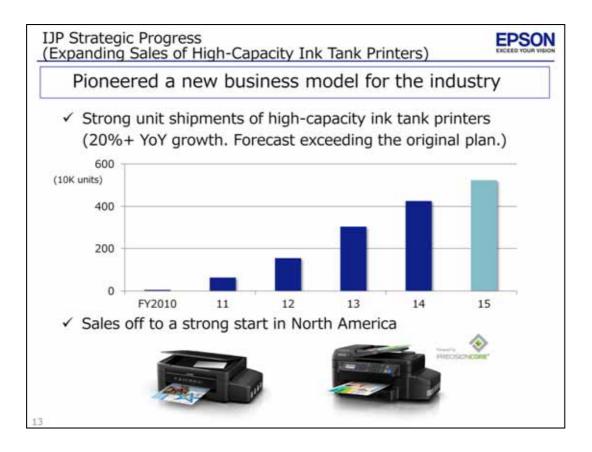

- Important second-half factors
- We believe that our financial performance continues to reflect the strides we have made in carrying out our inkjet printer and other business strategies.
- We are positioning ourselves for mid-term growth by investing in the development of new printers and projectors, investing in additional production capacity, and investing in projects to strengthen the brand and help accelerate sales.
- On the other hand, given the situation in the second quarter and growing uncertainty about the global economy because of factors such as the slowing Chinese economy, and the rapid and severe currency devaluation and delayed economic recovery in Latin America, certain changes are foreseen in the second half, including sluggish markets, a decline in public procurement, and more aggressive promotional pricing by competitors.
- Accordingly, we carefully examined the current environment and factored into the financial outlook all of the risks that can be predicted at this time.

 Important : 	second-half factors (business p	profit vs. previous outlook)
	Environmental Changes	Business Operations
Companywide	 Latin American currency devaluation 	Adjust prices
Printing Solutions	 Professional Printing Sluggish Latin American market Less demand for LFP components 	 LFP: Introduction of new models and price adjustments
H2 business profit (vs. previous year) - 9.0 billion yen	 Printers Price erosion for low- and mid-range IJP in North America and other regions 	 IJP: Hardware price adjustments while considering profitability BIJ: Expand sales of higher-priced models

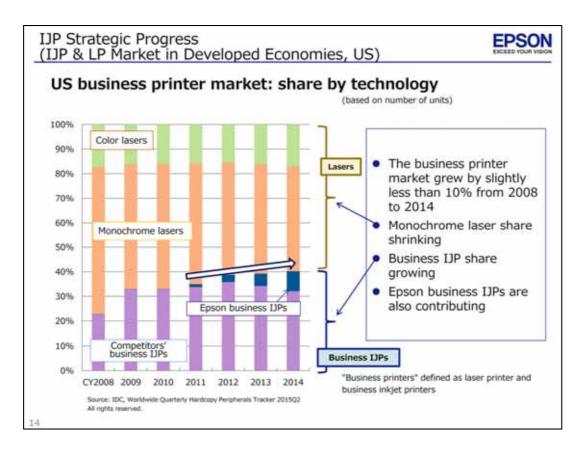

- Important second-half factors
- In a changing market environment, the devaluation of Latin American currencies will continue in the second half. Although we will implement price rises, we do not expect these to cover the decline.
- Against this background, we raised prices of high-capacity ink tank printers in the first half but were able to increase volume. Continuing in the second half we expect these models to experience steady growth. However, we are taking a cautious stance on products like LFPs and projectors because the competitive environment makes it difficult for us to raise prices.
- ➢ By segment, we are downwardly revising our second half business profit outlook for printing solutions by 9 billion yen. Slightly under 80% of this is from professional printing, while the remainder is from inkjet printers and SIDM.
- In professional printing we forecast a decline in sales volume due to sluggish market conditions, and a decline in demand for LFP components from external customers.
 In addition, we revised the launch schedule for some new LFP models and plan to adjust prices on our existing models.
- Next year we will introduce further products that answer customer needs, and will accelerate the flow from analog to digital
- In inkjet printers we expect to see lower prices for low- and mid-range products aimed at the North American and other markets. To secure the necessary sales volume to ensure profitability based on future ink sales we are responding with prices based on an assessment of the lifetime profitability of the printers.
- We also expect sales of higher-priced business printers to exceed plan, and believe our aim of replacing monochrome lasers with inkjet are on track in the North American and other markets.

	Environmental Changes	Business Operations
Visual Communications · 2.8 billion yen	 Projectors Markets to be sluggish due to economic slowdown Decline in public procurement for education projectors 	 Expand market presence by offering full lineup Develop competitive new products
Wearable & Industrial Products 1.9 billion yen	 Revenue decline due to economic slowdown (electronic devices and watches for overseas markets) 	Capture new customers for robots

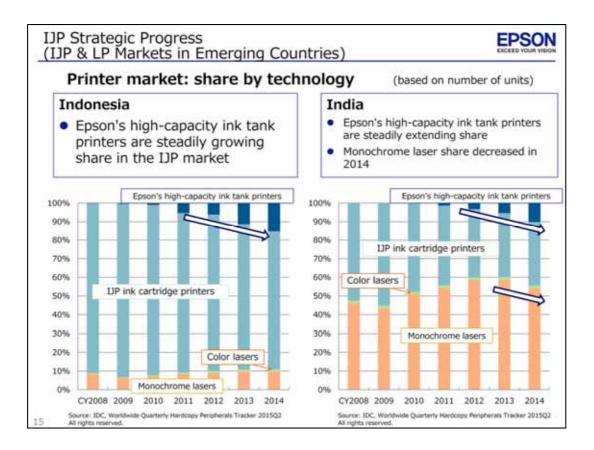

- Important second-half factors
- We are downwardly revising our outlook for visual communications by 2.8 billion yen. Although the projector market will remain sluggish in the second half, we will continue our efforts from the first half of expanding market share by offering a full lineup of products and expanding our market share. We are also taking measures to achieve medium-term growth by developing competitive new products for next year and pursuing R&D projects on new business domains.
- We are downwardly revising our outlook for wearables & industrial products by 1.9 billion yen. Although sales of electronic devices and watches for overseas markets will decline due to the economic slowdown, revenue will increase as we capture new customers for our robots.
- With these factors in mind, we will seek to achieve our targets through second-half measures such as strengthening control of costs and inventory, and strengthening our control of units manufactured by achieving greater supply chain efficiency.
- On the other hand, we see strategic investments in R&D, capital equipment and the brand as essential for growing profit based on our mid-range strategy. We will therefore proceed as initially planned, but only after implementing strict checks at the operational stage.
- As a result of this investment, we will be able to launch from next year onwards highly competitive new products that will contribute to profitability.
- We also expect that certain costs incurred in the current results will be eliminated from next year. This will help us to further control costs and will contribute to profitability from next year onwards.

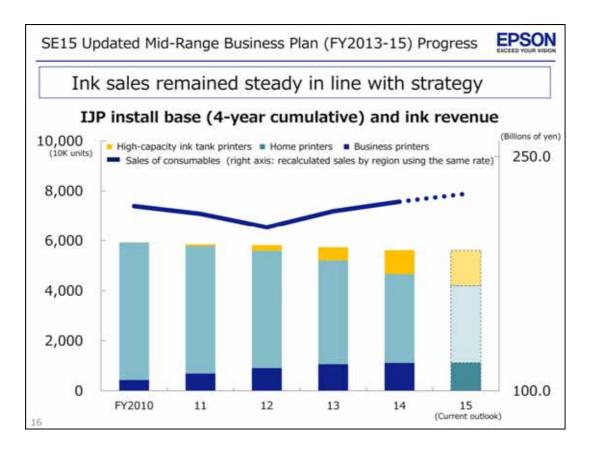

- Inkjet printer business strategic progress
- Epson has led the way in overturning the conventional business model in the printer industry by fully tapping into the capability of Epson's core Micro Piezo inkjet technology.
- High-capacity ink tank printers are one of the ways we are subverting the conventional business model.
- Since introducing these printers in FY2010, we have seen unit shipments grow steadily. Once again this year we expect 20% or better annual unit shipment growth and, moreover, see shipments exceeding our original plan.
- We launched high-capacity ink tank printers in Western Europe last year, and this year, in September, we introduced a new EcoTank line of printers in North America.
 These printers are positioned as a new value proposition for customers who need to print in high volume, and although we are not thinking of sharply expanding unit shipments in developed economies, sales are off to a strong start versus the plan.

- Inkjet printer business strategic progress
- The US business printer market grew at a rate of slightly less than 10% between 2008 and 2014.
- As you can see from the graph, business inkjet printers have been gaining share in this market, growing from about 20% in 2008 to about 40% in 2014. Conversely, the share of monochrome laser printers decreased over the same period.
- > We are seeing increased market share of Epson business printers.

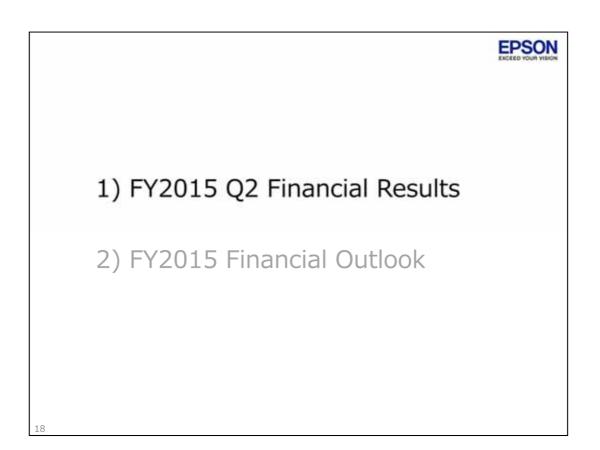

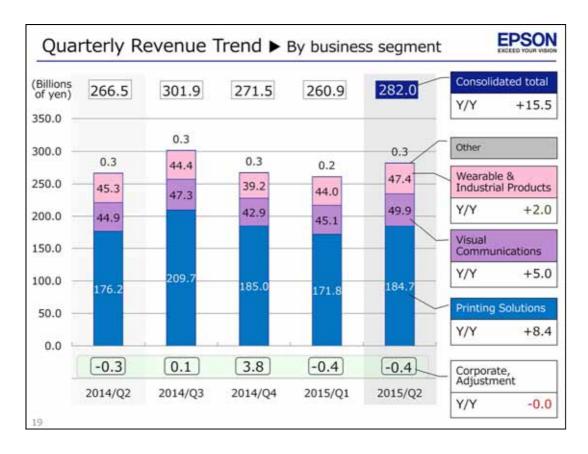

- Inkjet printer business strategic progress
- The Indonesian printer market has not shown signs of growth for several years. Yet, with inkjet printers already accounting for a large share of the market, we have succeeded in steadily increasing our share every year with our high-capacity ink tank printers, and have now secured around 15% market share.
- Up until 2013 monochrome laser printers led the growing Indian printer market. However, Epson's high-capacity ink tank printers have steadily gained market share since they were first introduced. Meanwhile, monochrome laser printers began losing share in 2014.

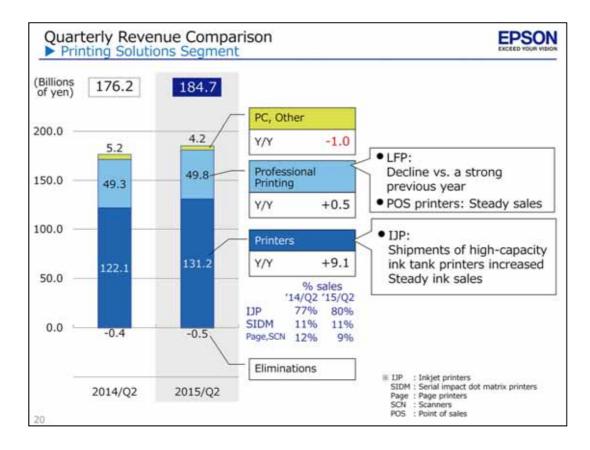

- SE15 updated mid-range business plan progress
- The upshot is that we are seeing steady results from our inkjet printer strategies. We have expanded unit shipments of high-capacity ink tank printers. We are seeing steady growth in ink sales thanks to an improved install base. And we are starting to see inkjet printers gradually supplant laser printers.

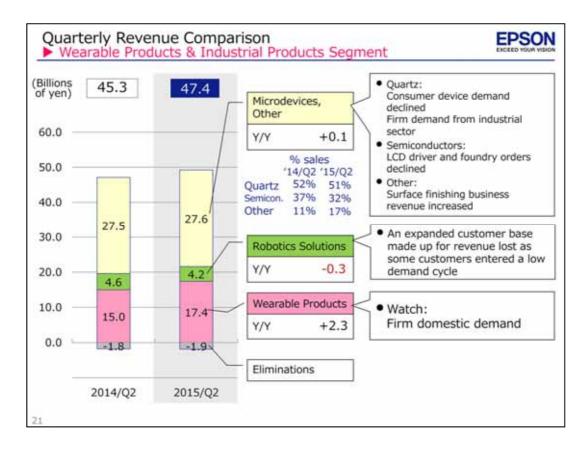

- Revenue by business segment over the last five quarters
- Compared to the same period last year, printing solutions revenue increased by ¥8.4 billion. Visual communications revenue increased by ¥5 billion. And wearable & industrial products revenue increased by ¥2 billion.
- Foreign exchange had an approximately ¥15.5 billion greater positive impact on revenue for the quarter than in the same period last year.
- In visual communications in the second quarter we set a new record for quarterly unit shipments, achieving year-on-year revenue growth and increasing revenue by ¥5 billion compared to the previous year.

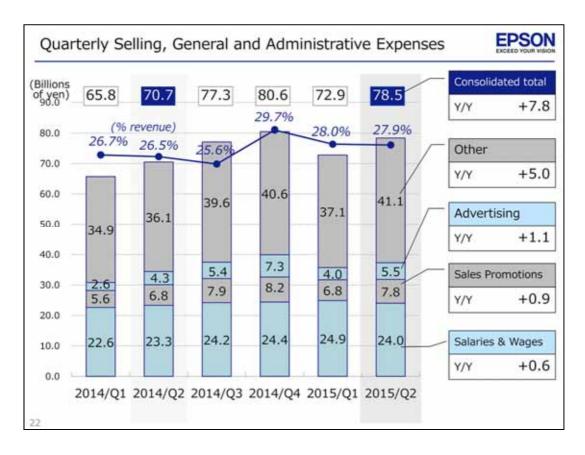

- Quarterly revenue in the printing solutions segment
- > Printing solutions recorded year-on-year revenue growth of ¥8.4 billion.
- The printer business saw unit shipments increase year-on-year mainly owing to continued firm demand for high-capacity ink tank printers especially in emerging markets and to demand for higher-priced business printers equipped with PrecisionCore printheads. Sales of ink also continue to increase, the result of an improved printer install base in developed economies.
- SIDM printer demand remained firm largely as a result of demand generated by the updating of tax collection systems in China and the demand from regions outside of China that are introducing SIDM printers in their tax collection system.
- In professional printing, A3 photo inkjet printer revenue in North America and Asia decreased. In addition, there was a backlash in demand for large-format printer parts after a temporary surge in the same period last year. Nevertheless, revenue was flat year-on-year thanks to a combination of firm POS printer demand and foreign exchange effects.

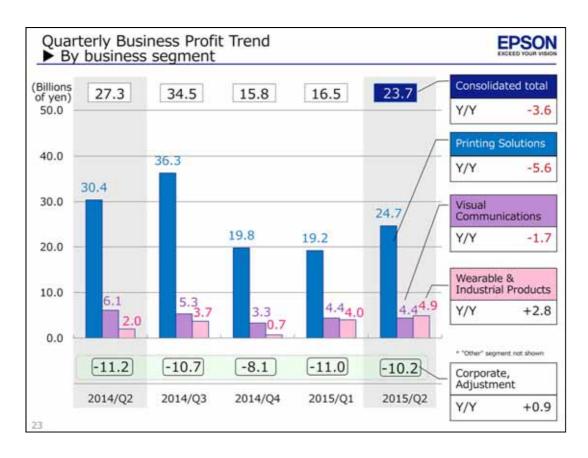

- Quarterly revenue in the wearable & industrial products
- Wearable products revenue surged year-on-year due to firm domestic demand for watches.
- Robotics solutions recorded revenue that was flat against the year-ago period. Although we saw some revenue decline owing to the demand cycle entering a lull for some customers, we made up for this by developing new customers.
- Revenue in microdevices was also flat year-on-year due to a combination of firm demand for crystal devices used in industrial equipment and foreign exchange effects, which offset weaker demand for crystal devices used in consumer products.
- Semiconductor revenue fell below last year's level because of lower demand for automotive display drivers and silicon foundry from a certain customer, both of which were strong last year.

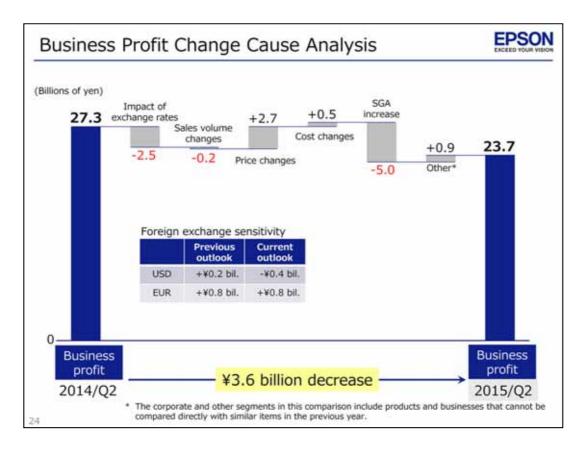

In other businesses, the powdered metal business and the surface processing business saw firm first-quarter demand carry over into the second quarter. On the whole, therefore, microdevices revenue was flat year on year.

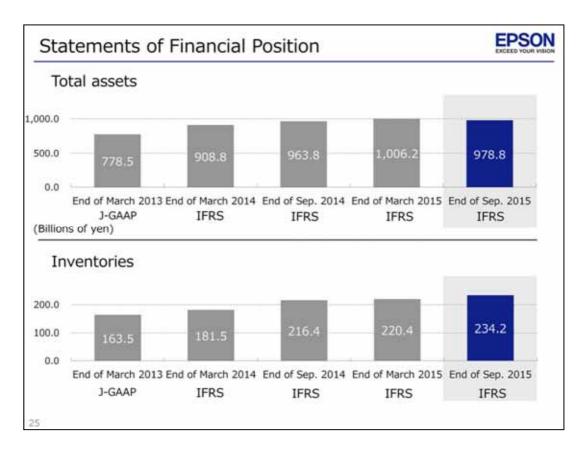

- Quarterly selling, general and administrative expenses
- Second-quarter SG&A expenses increased by ¥7.8 billion compared to the same quarter last year. In addition to an increase in yen conversion expenses due to the appreciation of the dollar, SG&A expenses increased because we spent more on R&D and on advertising and sales promotions to strengthen our brand and promote Epson and our products in new areas.

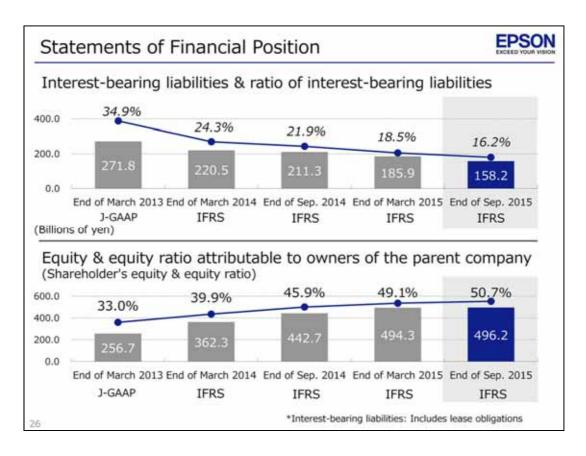

- Breakdown of quarterly business profit by segment
- Second-quarter total consolidated business profit was ¥23.7 billion, a decline of ¥3.6 billion compared to the same period last year.
- Foreign exchange had a negative impact of ¥2.5 billion compared to the same period last year.
- Printing solutions recorded lower business profit because revenue gains from sales of high-capacity ink tank printers and ink were more than offset by a combination of factors, including reduced revenue from large-format printers, inkjet printer price erosion, increased manufacturing costs for goods produced overseas due to the strong dollar, and higher selling, general and administrative expenses.
- Visual communications saw business profit fall below that recorded in the same period last year despite increased projector revenue. This was primarily due to the stronger dollar, which caused manufacturing costs to rise for goods produced overseas, a change in the model mix brought about by a relative decline in high-added-value education projectors, and increased strategic investment in areas such as R&D to position us to launch new products in upcoming years.
- Wearable & industrial product business profit increased primarily as a result of revenue growth and the effect of fixed cost reductions in the quartz business.

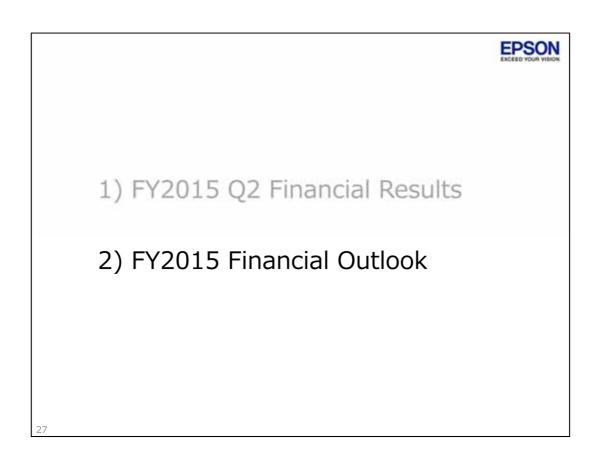

- Cause analysis of the decrease in business profit compared to the same period last year
- > Foreign exchange had a ¥2.5 billion negative impact in the second quarter.
- Despite the appreciation of the dollar versus the yen, we suffered losses due to the devaluation of Latin American currencies. In general, we are able to cover foreign exchange fluctuations in product prices, and thus calculate the impact of foreign exchange based on the movement of the dollar. However, the rapid and severe nature of the devaluation in the second quarter meant that we were unable to cover the losses in product prices and had to make additional calculations on foreign exchange impact.
- In consideration of the Latin American situation, we have decided to separate these currencies from the US dollar in our calculations of foreign exchange sensitivity. We are therefore adjusting our outlook for dollar sensitivity from a 200 million yen positive impact to a 400 million negative impact. Euro sensitivity remains unchanged at 800 million yen.
- Sales volume changes had a negligible effect on business profit, as the increases in unit shipments of high-capacity ink tank printers, POS printers, projectors and so forth were cancelled out by decreases in the volumes of large-format printer parts and microdevices.
- Price changes had a 2.7 billion yen positive effect on business profit. The negative impact of lower prices and worsened model mixes for ink cartridge printers, projectors and microdevices was offset by increased prices accompanying currency devaluations.
- We reduced costs in all of our businesses, so cost changes positively affected business profit.
- SGA expenses increased due to spending on R&D and on promotions to drive future growth.

- Major items on our statements of financial position
- Total assets decreased by ¥27.3 billion compared to the end of March 2015. Although inventories increased, total assets decreased mainly due to a decrease in cash and cash equivalents.
- Inventories temporarily increased because, in addition to seasonal factors as we head to the year-end shopping season, we did not sell as many inkjet printer and projector units as planned.

- Major items on our statements of financial position
- Interest-bearing liabilities were ¥158.2 billion, an decrease of ¥27.6 billion compared to the end of the previous fiscal year due chiefly to the redemption of bonds payable. The ratio of interest-bearing liabilities to total assets was 16.2%.
- ▶ Net cash was ¥32.3 billion.
- The equity attributable to owners of the parent company increased by ¥1.9 billion compared to the previous fiscal year end. The equity ratio attributable to owners of the parent company was 50.7%.

- Breakdown of revenue outlook in each business of the printing solutions
- We lowered the full-year revenue outlook in printers to ¥525 billion and in professional printing to ¥200 billion.

- The breakdown of the revenue outlook in the printer business
- We lowered the full-year inkjet printer volume outlook from 4% year-on-year growth in the previous outlook to 3% growth in the current outlook because we do not anticipate shipping as many units as initially projected, since we have responded in limited fashion to the aggressive promotional pricing by competitors in consideration of profitability over printer lifetime, including ink.

■ FY2015 estimated full-year and half-year business profit broken down by segment

- Outlook for capital expenditure and depreciation and amortization expenses
- > The capital expenditure outlook has not changed since the previous outlook.
- ➤ We still plan to aggressively invest in strategic projects with an eye toward medium- and longterm growth, but we will carefully review each investment before going ahead.
- Capital expenditure on a factory in the Philippines to expand inkjet printer and projector production capacity was recorded as a corporate expense up until the previous outlook but is now recorded as an expense of the printing solutions and visual communications segments.
- We expect to record ¥47 billion in depreciation and amortization expenses as was previously forecast.

- Cash flows
- We revised the outlook for cash flows based on the revised financial outlook. For the 2015 fiscal year we now expect ¥101 billion in cash flows from operating activities, ¥56 billion in net cash provided by investing activities, and ¥45 billion in free cash flows.

- Major management performance indicators
- ▶ ROS of 7.5%, ROA of 8.2%, and ROE of 11.8%
